To our regret, a considerable number of type and illustrated specimens to be preserved in this Museum are now missing. Any information about the place where "missing specimens" in this catalogue are actually kept would be greatly appreciated.

## FOREWORD

When World War II was drawing to a close, air raids on the city of Tokyo by the United States B-29s became only a question of time. We students worked day and night to pack our specimens to evacuate them to a safe place in the country. In 1944, in the midst of utter confusion during the compulsory evacuation of the town, the specimens left Tokyo for a rustic temple at Oishida, Yamagata Prefecture. When the war came to an end in 1945, Tokyo had been reduced to ruins and the whole country was plunged into confusion. The university fortunately escaped the fire, but all we could do was to make a bare living. The specimens, returned to the Geological Institute, were stacked in a storeroom of the basement; left without being unpacked, they became covered with dust.

Overcoming these difficulties, paleontological studies were resumed under the direction of Professor Teiichi Kobayashi soon after the war's end. In 1948, a new procedure of registration of type specimens was applied to some of the newly described fossil species. The procedure was so simple, pertinent, and convenient that it gradually replaced the traditional ones to become the rule for our type registration. The credit for the proposal of the new procedure now employed by our department of the University Museum goes to Dr. Koichiro Ichikawa, Professor at Osaka City University, at that time a graduate student of our university.

A few years before Professor Kobayashi's retirement from his professorship in 1960, a large number of trilobite and nautiloid specimens described by him during his tenure were set in order by Mr. Takeo Ichikawa. Regular curatorial work after the war started again about that time. In the later half of the 1950's, volunteer staff members and students belonging to the paleontology section of the Geological Institute, with Professor Fuyuji Takai in the lead, spent half a day once a week for about five years in curatorial work, believing in the importance of the type method in modern taxonomy. Most of the Cenozoic Molluscan types described by the late Professor Matajiro Yokoyama were thus arranged in proper order. Later publication of the revisional work by Dr. Katsura Oyama on Yokoyama's type Mollusca from the Tertiary and Quaternary of the Kanto area was made possible by these efforts.

In 1966, all the type specimens were transferred from the Geological Institute to the Department of Historical Geology and Palaeontology of the newly constructed Shiryokan, a building for storage of research materials. It was wishfully called the University Museum, but it actually required a decade of hardships to undergo a change from a storage Shiryokan at the time of inauguration to the present research Museum.

Recently, curatorial work has been advanced quite rapidly by Mr. T. Ichikawa. He is finally completing all the registration and a first draft of the catalogue of the type and illustrated specimens kept in our department of the Museum. The type specimens are grouped as they are in the relevant publications, and deposited with the published descriptions of the species and other members of the hypodigms<sup>1)</sup> of the original describers. Thus the indirect causal relations between the scientific name as a symbol and the species as a referent<sup>2)</sup> at the time of original description are ready for analysis with the aid of the function of a type specimen as a name-bearer<sup>1)</sup>. Unfortunately, however, many of the classical authors failed in designating the type specimens and thus created an ambiguous situation. Dr. Itaru Hayami has given the finishing touch to the catalogue by checking it especially in terms of the International Rules of Zoological Nomenclature.

The post-war rearrangement of the type collection has just been finished, and we can say that the type specimens which once left Tokyo and returned again to the university are even more conveniently arranged than before the war. We owe thanks for this situation to Dr. I. Hayami of the University Museum, and to Mr. T. Ichikawa and the former and present staff members and students of the paleontology section of the Geological Institute who made significant contributions during the thirty long years of effort toward the consolidation of the taxonomic foundations necessary for the further development of paleontology.

PART I. PALEOZOIC AND MESOZOIC FOSSILS

by

Takeo ICHIKAWA and Itaru HAYAMI

Introduction

In 1877, just one century ago, the University of Tokyo was established, and scientific research on Japanese fossils and teaching of paleontology were begun by Professor Edmund Naumann and other foreign lecturers. Since then, many paleontological papers have been published by successive teachers and students of the Geological Institute and other departments of this university, and a large number of fossil specimens have been accumulated. Type and illustrated (or described) specimens are irreplaceable and especially important; they must be safely preserved and arranged as taxonomic bases for further investigations. In the earlier half of the above period taxonomists seldom had any solid concept of type specimens, but it is quite fortunate that successive staff members of the Geological Institute continued to preserve many described specimens. All the collections of this institute fell into great confusion during the Second World War, but most of them were saved from the fire. Now, we can distinguish the described specimens within the collections by comparison with original illustrations, even if their labels have been lost or damaged.

Some authors before the War already used private specimen numbers in their own manner. Many Cretaceous fossils, whether described or undescribed, were once registered with the prefix Cr. or I. In 1948, the general rules of registration of described specimens, which are still fundamentally valid, were established by some students, and occasional curatorial works were made under the direction of Professors Teiichi Kobayashi and Fuyuji Takai. During this period, however, registration and storage of described specimens were almost entirely entrusted to each author, and the system of

care remained far from ideal. On the occasion of the 25th Anniversary of the Palaeontological Society of Japan, "Catalogue of Type-specimens of Fossils in Japan" (Hanzawa, S., Asano, K. and Takai, F. compiled, 1961) was published by the Society, but at that time only a part of type specimens in the Geological Institute was registered.

In 1966, the University Museum was established in the University of Tokyo, and all the described specimens of fossils as well as other collections were transferred from the Geological Institute to it. Since then, the Department of Historical Geology and Palaeontology of the Museum has been taking care of preservation and arrangement. For the past several years one of us (T. I.) has been continuing regular curatorial work on the specimens of Paleozoic and Mesozoic fossils under the direction of Professor Tetsuro Hanai and very recently has completed the registration and arrangement. At present, mainly Professor Hanai and the two of us are taking care of these specimens in the type room of this Department. Although more than 10 percent of described specimens are, to our regret, still missing, the remaining ones are presently arranged by descriptive papers (i. e. authors and dates), because we believe it is probably the most convenient way not only for the curators but also for visitors.

Reflecting the history of paleontological researches in this university, most Paleozoic and Mesozoic described specimens are of larger invertebrates: trilobites, cephalopods and bivalves are especially abundant. On the contrary, microorganisms, vertebrates and plants are comparatively few. The type and illustrated specimens (including missing ones) total 5835, are made up as follows:

Paleozoic Plantae	26
Paleozoic Protozoa	237
Paleozoic Porifera	3
Paleozoic Coelenterata	56
Paleozoic Brachiopoda	266
Paleozoic Mollusca	605
Paleozoic Arthropoda	2018
Paleozoic Echinodermata	17
Paleozoic Worms and Problematica	8

Paleozoic Hemicordata	4
Paleozoic Vertebrata	1
Mesozoic Plantae	43
Mesozoic Protozoa	24
Mesozoic Coelenterata	3
Mesozoic Brachiopoda	103
Mesozoic Mollusca	2256
Mesozoic Arthropoda	128
Mesozoic Echinodermata	6
Mesozoic Vertebrata	31

Besides, some type and illustrated specimens of Mesozoic plants are preserved in the Department of Botany of this Museum, but they are not listed in this catalogue.

We express our sincere gratitude to Professor Tetsuro Hanai for his supervision throughout this curatorial work and his warm encouragement. Professor Emeritus Teiichi Kobayashi (University of Tokyo) and Professor Emeritus Tatsuro Matsumoto (Kyushu University) gave us useful information at our requests during the preparation of this catalogue. Acknowledgments are also due to many successive staff members and students in the Geological Institute of University of Tokyo who laid a foundation of the present arrangement and registration of specimens; without their efforts the present catalogue would not have been accomplished.

## Registration of specimens

In order to meet the convenience of visitors and investigators we state here the following traditional policy of registration of specimens in the Department of Historical Geology and Palaeontology, the University Museum, University of Tokyo.

- 1) The following rules are concerned only with described specimens (including replicas) of organisms, whether living or fossil, which are preserved or to be preserved in the Department.
- 2) Each individual (or colony) of type and illustrated specimens has one specific register number. (Therefore, the same number is given to the mould and cast, if they originated from one and the same individual.) Different individuals on the same inseparable slab or block should be distinguished by different registration numbers or at least by different suffix a, b, c,.... As to described but unfigured specimens, however, more than one individual may be treated collectively under a single registration number.
- 3) Two capital letters indicating the age (Era) and taxonomic position (Phylum, etc.) should be prefixed to each registration number.

First letter (age):

P: Paleozoic, M: Mesozoic, C: Cenozoic, R: Recent

Second letter (taxonomic position)

P: Plantae, F: Protozoa, S: Porifera, C: Coelenterata, B: Brachiopoda and Bryozoa, M: Mollusca, A: Arthropoda, E: Echinodermata, H: Hemicordata, V: Vertebrata, W: "Worms" and Problematica

Once determined the prefix is not altered, even if the age or taxonomic position is changed after registration.

4) Deposition and registration of described specimens should be made by the author of each paper in consultation with the curator in the Department. The author (or curator entrusted by the author) is requested to enter the necessary details (taxonomic name, locality, horizon, reference with numbers of page, plate and figure, etc.) in a register book. Without this procedure any registration number cited in papers might be invalidated.

5) The author is requested to present two copies of the relevant publication to the Department for curatorial purposes.

LIST OF TYPE AND ILLUSTRATED SPECIMENS BY PAPERS

The format of this catalogue is fundamentally in agreement with the method of arrangement in the type room of this Department. Relevant descriptive papers (shown by bold-faced letters) are alphabetically arranged by author names (and dates), and the type and illustrated specimens in the same paper are listed in order of registration numbers. Some missing specimens, mentioned in old papers, which are not yet registered, are not listed here. Taxonomic names are uncritically listed, since their modernization over so diverse taxonomic groups is clearly beyond our ability. Only some typographical, grammatical and other evident errors in their original spelling are corrected. Categories of type specimens, namely holotype (by original designation and monotypy), paratype, syntype, lectotype and paralectotype, are critically examined by one of us (I. H.) in accordance with the International Code of Zoological Nomenclature. However, the true status of "syntypes" in the listed specimens cannot always be confirmed, because some of them may have been designated as lectotypes and paralectotypes by subsequent taxonomic studies at home and abroad. The registration numbers with an asterisk indicate that only replicas (plaster casts, etc.) of original specimens are preserved or to be preserved in this Department. Horizons and localities are, of course, indispensable information for further investigations, but they are not mentioned in this catalogue, because we believe that most investigators and visitors will observe these described specimens after having seen the original papers. In most cases we could hardly give any more detailed information about the horizons and localities than written in the original descriptions.

Only dental modeling casts are preserved in this museum. Although the repository of the original specimens was not specified in this article, three of the casts (PA1654-PA1656) were taken from Lake's types preserved in the British Museum of Natural History, London, and the remaining casts were mostly from Steinmann and Hoek's collection in the Geological Institute, Freiburg.

INDEX OF TAXONOMIC NAMES

\*\*\*\*\*  
\* In this index taxonomic names of type and illustrated specimens  
\* of Paleozoic and Mesozoic fossils registered in the Department of  
\* Historical Geology and Palaeontology are classified into higher  
\* taxonomic groups (mainly classes) and alphabetically listed. Each  
\* taxonomic name is followed by author name and date of relevant  
\* descriptive paper and register number(s). The spelling of taxonomic  
\* names in original descriptions, if nomenclaturally incorrect, is not  
\* amended here. See the preceding "List of type and illustrated  
\* specimens by papers" (pp.5-303) for further details.

*Estherites middendorffii*: Kobayashi and Kusumi, 1953a [MA4753]

*Estherites middendorffii* var. *chii*: Kobayashi and Kusumi, 1953a [MA4762-4764, 4771]

ARTHROPODA

Mesozoic Crustacea (continued)

- Estherites middendorfii* var. *elongata*: Kobayashi and Kusumi, 1953a [MA 4757-4760]
- Estherites middendorfii* forma *intermedia*: Kobayashi and Kusumi, 1953a [MA4766-4769]
- Estherites middendorfii* var. *jeholensis*: Kobayashi and Kusumi, 1953a [MA 4754-4756]
- Estherites middendorfii* forma *peipiaoensis*: Kobayashi and Kusumi, 1953a [MA4765]
- Estherites middendorfii* forma *subelongata*: Kobayashi and Kusumi, 1953a [MA4761]
- Estherites middendorfii* forma *takechenensis*: Kobayashi and Kusumi, 1953a [MA4770]
- Estherites naktongensis*: Kobayashi and Kido, 1947a [MA4731]
- Estherites nenkiagensis* var. *kutsangkouensis*: Kobayashi and Kusumi, 1953b [MA4772h,4772i,4772j,4775]
- Estherites proamurensis*: Kobayashi and Kusumi, 1953b [MA4772f,4772g]
- Estherites proamurensis* var. *latus*: Kobayashi and Kusumi, 1953b [MA4773b]
- Estherites rampoensis*: Kobayashi, 1951a [MA4740b]
- Estherites* sp. aff. *E. rampoensis*: Kobayashi, 1951a [MA4750]
- Estherites* sp. aff. *E. reticulata*: Kobayashi, 1951a [MA4744c]
- Estherites saitoi*: Kobayashi and Kusumi, 1953b [MA4773a]
- Estherites shimamurai*: Kobayashi, 1951a [MA4746a,4746b,4747-4749]
- Estherites tanii*: Kobayashi, 1951a [MA4744a,4745]
- Estherites tatientzuensis*: Tani, 1943 [MA3948a,3948b]
- Estherites cfr. transbaikalica*: Kobayashi, 1951a [MA4744b]
- Estherites tunghuensis*: Kobayashi and Kusumi, 1953b [MA4772a,4772b]
- Eucorystes japonicus*: Jimbo, 1894 [MA7483]
- Eucypris manchurica*: Hanai, 1951 [MA8507]
- Euestheria buravasi*: Kobayashi, 1975 [MA9146,9147]
- Euestheria mansuyi*: Kobayashi, 1973b [MA9145a], Kobayashi, 1975 [MA9145a]
- Euestheria thailandica*: Kobayashi, 1975 [MA9145b]
- Gomphocythere?* *tiehlensis*: Hanai, 1951 [MA8520]
- Khoratestheria macroumbo*: Kobayashi, 1975 [PA9148a]
- Lioestheria* sp.: Kobayashi, 1973a [MA9144f]
- Lioestheriid(?) gen. et sp. indt.*: Kobayashi, 1973a [MA9144e]
- Metarhabdosticha(?)* sp.: Kobayashi, 1975 [MA9149]
- Notopocorytes (Eucorystes) japonicus*: Matsumoto, 1963 [MA7483]

ARTHROPODA - ECHINODERMATA - WORMS AND PROBLEMATICA

Mesozoic Crustacea (continued)

*Paracypretta? petila*: Hanai, 1951 [MA8523,8524]

*Potamocypris? itunghensis*: Hanai, 1951 [MA8505]

*Pseudocyclograpta hashimotoi*: Kobayashi, 1973a [MA9144a,9144b,9144c,9144d]

ECHINODERMATA

PALEOZOIC CYSTOIDEA

Cystoid, gen. et sp. undt.: Kobayashi, 1935c [PE0902-0904]

Cystoid, gen. et sp. indt.: Kobayashi, 1937c [PE1538,1539]

Cystoid, gen. et sp. indt.: Kobayashi, 1960a [PE2423]

Cystoid(?) stem: Kobayashi, 1934c [PE0788-0791]

Stems of cystoids: Kobayashi, 1934c [PE0786,0787]

*Plumulites chikunensis*: Kobayashi, 1934b [PE0513]

*Plumulites primus*: Kobayashi, 1934c [PE0792]

*Plumulites cfr. primus*: Kobayashi, 1960a [PE2415b]

*Plumulites* sp. nov.: Kobayashi, 1960a [PE2399b,2424]

MESOZOIC CRINOIDEA

*Pentacrinus* sp.: Hayami, 1961c [ME4837]

*Pseudosaccocoma japonica*: Kobayashi, 1935e [ME7031]

MESOZOIC ECHINOIDEA

*Ananchytinarum* sp.: Jimbo, 1894 [ME7482]

*Cidaris* (s. l.) sp.: Kobayashi and Ichikawa, 1952b [ME5407]

*Niponaster hokkaidoensis*: Matsumoto, 1963 [ME7482]

*Pygurus asiaticus*: Tokunaga, 1903 [ME7448,7449]

WORMS AND PROBLEMATICA

PALEOZOIC WORMS AND PROBLEMATICA

*Coprolites*(?): Kobayashi, 1960a [PW2425,2426]

*Cruziana* cfr. *furcifera*: Kobayashi, 1937c [PW1689,1690]

*Cruziana* sp.: Kobayashi, 1937c [PW1691]

*Notaculites toyomensis*: Kobayashi, 1945 [PW1994]

*Serpulites ruedemanni*: Kobayashi, 1934c [PW0793,0794]

HEMICORDATA - VERTEBRATA

HEMICORDATA

PALEOZOIC GRAPTOLITHINA

*Clonograptus*(?) sp.: Kobayashi and Kimura, 1942 [PH1858]

*Dicellograptus* or *Dicranograptus* sp.: Kobayashi, 1934b [PH0512]

*Dictyonema* cfr. *flabelliforme*: Kobayashi and Kimura, 1942 [PH1857]

*Diplograptus* (*Amplexograptus*) *perexcavatus*: Kobayashi, 1934b [PH0511]

VERTEBRATA

PALEOZOIC VERTEBRATA

*Helicoprion bessonowi*: Yabe, 1903a [PV7477]

MESOZOIC VERTEBRATA

*Asiatolepis muroi*: Takai, 1944 [MV6180]

*Leptolepis longicephalus*: Takai, 1942 [MV6151]

*Lycoptera chosenensis*: Makiyama, 1927 [MV4210]

*Lycoptera davidi*: Takai, 1944 [MV4210, 6152-6175]

*Lycoptera ferox*: Takai, 1944 [MV6177, 6178]

*Lycoptera kansuensis*: Takai, 1944 [MV6179]

*Manchurichthys uwatokoi*: Takai, 1944 [MV6176]

*Sungarichthys longicephalus*: Takai, 1944 [MV6151]
